

MARKING & TRACEABILITY SYSTEMS FOR THE METALS INDUSTRIES

It doesn't just look pretty. It saves you money.

The wrong heat number got stamped on a billet. It's just two little numbers that were transposed – what's the big deal? Try explaining that to your customer who just had a product fail because you shipped them the wrong grade of steel.

More of those cheap labels fell off some bundles in the yard and you might be shipping the customer mixed product. They won't mind, will they?

To get your customers what they ordered, your product identification needs to be accurate and legible, and it needs to remain on the product until it's delivered to the customer.

With the right tools, you can eliminate those costly product mix-ups and shipping errors, and save your customers a lot of pain. You need to be able to depend on your marking system. That's where we come in.

Pannier Corporation has been helping metal manufacturers avoid those "oops" moments for over 100 years. Working with you as you face each new challenge, we've developed the most reliable solutions for printing, indenting, and tagging metal products. From consultation to custom engineering to individualized software integration, Pannier's goal remains: providing identification systems best suited to each individual application and each individual company.

Tell us what you need, we get it done for you. It's that simple. With a wide range of marking systems for identifying metals at every stage of production, you can get it done right the first time and enjoy the savings from your investment.

For a free marking needs analysis, call us toll-free at 1-877-PANNIER or visit www.pannier.com.

Bar coded metal tags are the most reliable way to identify and track slabs, blooms, billets, bundles, and coils. That's why the world's largest steel companies have relied on Pannier tags since we introduced them in the 1980s. We now offer a full range of tags, labels, and attaching systems for a wide variety of applications.

For marking directly onto products like rail, strip, and pipe, Pannier offers several industrial strength printing systems for tough printing jobs, including our ultra-reliable ink jet printers and flexographic printers and the world's leading tinplate printer. Challenge us with your most difficult printing needs.

For permanent identification that will withstand all the abuse you can heap on it, indenting is effective and reliable. From heavy duty stampers for marking hot and cold products to programmable stampers for marking 2D data matrix codes, Pannier offers a wide range of solutions.

PANNIER®

A HISTORY OF RELIABLE MARKING SOLUTIONS FOR INDUSTRY

The Pannier Corporation is recognized as one of the world's leading designers and manufacturers of industrial marking and identification products. What sets our company apart is a reputation for quality and innovation, standards embraced by our company founders over a century ago.

Pannier was founded in 1899 in Pittsburgh, Pennsylvania, to serve the area's growing steel industry with simple marking tools. Since that time, Pannier has grown to become one of the world's largest marking equipment manufacturers dedicated to providing the metals industries with the most reliable and cost-saving systems for identifying their products.

Today Pannier serves metal producers, processors, and service centers across the globe. With a legacy of high-quality industrial products, helpful and responsive customer service, and a dedication to developing solutions to our customers' problems, we are proud to be a trusted metals industry partner.
