

## Marking Steel Castings

This manufacturer of lifting clamps for beam and pipe applications marks each of their castings using S Series tabletop programmable stampers from Pannier. They mark the castings with serial numbers from four to 20 characters long, with character heights ranging from .15" to 1/2". They upgraded to programmable stampers from their previous marking method of hand stamping with steel stamps. This enabled the company to reduce labor costs, eliminate worker injuries, and increase productivity.
