

Structural Steel Tags

This manufacturer of structural steel uses Pannier metal tags to identify each piece. The metal tags withstand cleaning, coating, outdoor storage, and shipping without any loss of product identification. Each tag, marked with a job and part number, is either welded or tied with wire onto the steel pieces. A Pannier Model 416 Embossing Machine enables the manufacturer to make large volumes of tags quickly. Average production volume is 25,000 pieces per month.
