

ROOVERS METAL TAPE EMBOSsing MACHINES

Roovers Metal Tape Embossing Machines are economical solutions for creating small quantities of embossed or debossed metal tags. Using a character selection wheel, characters are embossed one at a time by pulling a handle. When the tag is completed, simply move the wheel to the FINISH position and the unit adds a blank margin at the end of the tag, cuts the rounded ends, and punches a hole. The tag then exits from a chute, ready for attachment to your product. An optional slotter is also available to punch slots in the tags for attachment with banding.
